ON THE DEEP COLD

Winter is not a colour problem.

The traditional Japanese calendar does not hand you four seasons. It hands you seventy-two. The year is cut into twenty-four *sekki*, and each of those into three *kō* of roughly five days — small, exact, observed. We are writing this during *daikan*, the great cold: the week the old almanac marks as "butterburs bud beneath the snow." Even in the hardest cold, something is already turning.

That is the winter instinct worth keeping at home. A cold room is rarely cold because of temperature. It is cold because it was decorated in cool greys and bright whites and left there — clinical, correct, joyless. The fix is not more colour. It is warmer neutrals, fewer of them, and light low enough to forgive the dark.

The Danes have a word the design magazines wore out: *hygge* — older than its candle-and-blanket reputation, rooted in an Old Norse sense of refuge. The Japanese have *seijaku*, the stillness that is composed rather than empty. This issue lives between them. Warmth, held in restraint.

Calm & Oak

THE PALETTE

A winter of warm greys

The single most common winter mistake is a cool-neutral one — white walls, grey floor, cool-toned furniture — which reads as a waiting room. The Japandi palette is warm-neutral. Look at what actually goes grey in nature: stone, bark, fog, ash, weathered wood. None of it is blue. Choose five tones with red and yellow underneath, hold an ember in reserve, and stop.

Warm greige
#D9D2C7 · walls

Oat
#E7DECB · linen

Walnut
#6B5746 · wood

Stone
#A9A399 · ceramic

Ember
#C97B5C · the one
accent

"Warmth isn't a colour. It's the restraint to use only five."

USING THE FIVE

Where each one goes

- **Warm greige** is the room. Walls, the largest soft surfaces. It is the colour fog would be if fog were warm. It should be doing almost nothing, which is the whole job.
- **Oat** is the cloth. Linen, wool, the curtain, the throw. It is the warmth you feel before you can name it. Layer two weights of it before you reach for a second colour.
- **Walnut** is the structure. One or two pieces of genuinely dark wood keep a pale room from floating away. In a winter room, wood is gravity.
- **Stone** is the object. A hand-thrown vase, a salt cellar, the matte grey of unglazed clay — the texture you want where the eye lands.
- **Ember** is the held breath. The terracotta appears once and never twice in the same view. One ember in a quiet room is a fire. Two is a theme.

Calm & Oak

冬籠り

FUYUGOMORI

A WORD

Fuyugomori

"Winter confinement" — the old word for the deliberate drawing-in of the cold months. Not the grim sense of being snowed in, but the chosen one: the bear to its cave, the seed under the soil, the household to its warm centre. A season understood as withdrawal rather than lack.

It reframes the whole winter project at home. You are not waiting out the dark; you are keeping a den through it. *Fuyugomori* gives you permission to make the room smaller, lower, warmer — to close the curtains early, light the corner, and treat the long evening as the point of the season rather than its penalty.

Calm & Oak

THE SEASON, IN FIVE-DAY WEEKS

Daikan — 大寒

Winter's last and coldest *sekki*, late January. The court astronomer Shibukawa Shunkai rewrote these names in 1685 so they would match the Japanese sky rather than the Chinese one they were borrowed from. Read across its three *kō* and you can feel the year leaning toward spring.

First kō Butterburs bud beneath the snow. The first green thought of the year, made underground, in the dark, where no one asked it to.

Second kō Mountain streams freeze solid. The pause — the held note. The week to do less, not more.

Third kō Hens begin to lay. The turn. *Risshun*, the beginning of spring, is now five days away — by the old reckoning, not the thermometer's.
